

# Solutions for the Energy Buyer

## Stabilizing Your Budget

Eco Power Hedge offers a sensible solution to help commercial energy buyers stabilize their budgets without affecting energy purchase decisions. We provide all of the services needed to create Renewable Energy Hedge™ agreements. These agreements are based on a traditional “Contract for Differences” (CFD) financial swap structure. The CFD renewable energy hedge is a secure financial tool which enables energy users and renewable energy producers to come together and control their costs. Because it is a financial swap and not a power purchase, the hedge agreement does not interfere with energy purchases at any time. It is simply a great way to control energy costs. Our expertise as an experienced Buyer’s Agent Representative together with our analytical services can make it easy and it works!

## How it Works

In a Renewable Energy Hedge the two parties include a commercial energy user and a renewable energy producer. These two parties agree on a strike price and a duration or term for the agreement. The producer continues to sell power into the usual local spot market. The user continues to buy power from the usual supplier. The energy sales are then analyzed. If the income received by the energy

producer is greater than the strike price, the producer pays the user. If the income is less than the strike price, then the user pays the producer. The widely variable cost becomes fixed by the strike price. It is a simple and effective tool that creates a win-win scenario for both parties.

## The Analysis

Eco Power Hedge can help you gain the information you need to plan for your energy costs in the future. Our team includes financial experts and energy analysts with over 25 year of experience. Our services include a feasibility study that provides you with an exhaustive examination of present and likely future costs with and without the hedge. We also provide

comprehensive measurements of historical, current, and future hedge behavior. And we can help you determine the benefits of various strike prices and terms (15 - 20 years). As a Buyer’s Representative, we make sure you have all of the data needed to make the best decision for your organization.

## Agreements

Once a term and strike price are determined, Eco Power Hedge has experienced energy analysts to track and monitor hourly output sales and price data from the producer(s) to determine any hedge payments to be

made. There is a complete audit trail based on ISO price data and the output data filed with the local distribution company. Eco Power Hedge is also independent from any renewable energy producers and serves solely as a Buyer’s Agent Representative.

## Green That Makes Sense

Creating a more sustainable future and going “Green” can also make good economic sense. At Eco Power Hedge we are offering a service that creates greater sustainability for your organization as well as the environment. Along with stabilizing your budget, these hedges can also include Renewable Energy Certificates (RECs) to offset climate emissions. We can customize a plan to meet your economic needs while helping you create a cleaner energy future.
